-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19 and 73-76 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Wang '154.

The “selective variable force” is met by the engaged position (teeth 512 engaged with teeth 322A) and a released position (teeth unengaged).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19 and 73-87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang '154 in view of Coslett '867.

Wang discloses everything except the frictional brake. Wang discloses a positive stop system that uses teeth. However, Coslett is analogous and he uses a frictional brake system, as seen in Fig. 22, wherein brake pad 72 engages spool 30 by way of biasing means 74, which may be selectively released. Such a teaching of a friction brake instead of a positive brake would provide ample suggestion to modify Wang to

have such a friction brake which would prevent damage to the shade by releasing the cords under excessive force.

Claim 88 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al '154 in view of Coslett, as applied above, and further in view of Biro et al.

Providing separate grooves for each cord on a cord storage spool is well known, as illustrated by Biro et al. In view of this teaching, it would have been obvious to provide one spool with separate grooves so as to reduce the number of spring motors and spools needed as well as to keep the cords from becoming entangled.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new grounds of rejection. However, Coslett is now used to provide a teaching of a frictional brake. Adequate motivation to modify Wang in view of Coslett is given above.
